

## Finca Zaida

The Finca Zaida is located on the San Miguel Plateau in the foothills of the Fila Cal.

This property forms a connection between the southern foothills and the main ridge of the Fila Cal and lies in a transitional zone between lowland rainforest and montane rainforest. The finca currently comprises pastureland and, to a lesser extent, forest (old stand forest and secondary forest), mainly along the two creeks that hug the property, which thus also makes it important for water protection.

The Finca Zaida is ideally suited for reforestation and species enrichment with rare tree species.

Start of the reforestations: planned for Fall 2022.

### Finca Zaida

Area: 15,7 ha

Location: San Miguel, 460 - 550 asl.

Vegetation at the time of purchase: mainly pasture, old stand forest along the creeks and the southern area of the property.

Date of acquisition: 07-29-2022

Funding: Rainforest Luxemburg

Planned Projects: Reforestation, areas of natural succession, forest protection.

Finca Zaida seen from the south towards the Fila Cal. The connection of the forest fragments is visible.
